## Export

[Help for this Page](#) 

You can export three kinds of text

- Source - Produces one file that contains all of the text that is translatable
- Outdated and untranslated - Produces a set of files, by language, with text changed after the last translation and text that is not yet translated
- Bilingual - Produces a set of files by language that contain all of the text that is translatable

Salesforce translation files are exported in the UTF-8 encoding to support extended and double-byte characters. This encoding cannot be changed.
