[Import](#)

Importing is designed to accept the files produced from our Export process. If you have not done an export, please go to the export page now. For additional information on the general import/export process please see the Help and Quick Tips links on this page.

### Quick Tips

- [Language code reference](#)
- [Import/Export tip sheet](#)

## Import

### Step 1. Prepare the translated Tab Separated File

Do the following before you begin to import:

1. Create a separate file for each language that contains only the key and translation.
2. Specify the language for this translation import. Use a [valid language code](#).
  - In .xlf files, use the target-language attribute on the file tag. For example, <file original="Salesforce" source-language="en\_US" target-language="en\_US" translation-type="metadata" datatype="xml">
  - In .stf files, update the Language code. For example, "Language code: es".
3. Save import files in UTF-8 encoding before importing.

### Step 2. Zip your files (Optional)

If you are uploading multiple language files you can zip all of them together for easier import.

### Step 3. Select and upload your file(s)

Zip or individual file

No file chosen

### Step 4. Import your files

Export

Importing is designed to accept the files produced from our Export process. If you have not done an export, please go to the export page now. For additional information on the general import/export process please see the Help and Quick Tips links on this page.

#### Quick Tips

- [Language code reference](#)
- [Import/Export tip sheet](#)

Your import request is being processed. Wait for it to finish before submitting another request. You'll receive an email when it's done.

### Import

#### Step 1. Prepare the translated Tab Separated File

Do the following before you begin to import:

- Create a separate file for each language that contains only the key and translation.
- Specify the language for this translation import. Use a [valid language code](#).
  - In .xlf files, use the target-language attribute on the file tag. For example, <file original="Salesforce" source-language="en\_US" target-language="en\_US" translation-type="metadata" datatype="xml">
  - In .stf files, update the Language code. For example, "Language code: es".
- Save import files in UTF-8 encoding before importing.

#### Step 2. Zip your files (Optional)

If you are uploading multiple language files you can zip all of them together for easier import.

#### Step 3. Select and upload your file(s)

Zip or individual file

No file chosen

#### Step 4. Import your files

The diagram illustrates the flow of translation for various labels. Red arrows point from the untranslated labels in the list to the file 'translated-1.psv'. Green arrows point from the same labels to the file 'translated-2.psv'. The labels are:  
- Facturation (red arrow to translated-1.psv)  
- Up-sell / Cross-sell Opportunity (green arrow to translated-2.psv)  
- Statut de livraison (red arrow to translated-1.psv)  
- Priorité du client (red arrow to translated-1.psv)  
- Nombre d'emplacements (green arrow to translated-2.psv)  
- SLA Expiration Date (red arrow to translated-1.psv)  
- SLA Serial Number (green arrow to translated-2.psv)  
- Upsell Opportunity (red arrow to translated-1.psv)  
- count (green arrow to translated-2.psv)  
- Engineering Req Number (green arrow to translated-2.psv)  
- Potential Liability (green arrow to translated-2.psv)  
- Product (green arrow to translated-2.psv)  
- SLA Violation (green arrow to translated-2.psv)  
- Languages (green arrow to translated-2.psv)  
- Level (green arrow to translated-2.psv)  
- OrigGoalId (green arrow to translated-2.psv)  
- Current Generator(s) (green arrow to translated-2.psv)  
- Number of Locations (green arrow to translated-2.psv)  
- Primary (green arrow to translated-2.psv)

6 # - An asterisk (\*): The label is out of date. A change was made to the default language label and the translation hasn't been updated.  
7 # - A dash (-): The translation is current.  
8  
9 # Notes:  
10 # Don't add columns to or remove columns from this file.  
11 # Tabs (\t), new lines (\n) and carriage returns (\r) are represented by special characters in this file. These characters should be preserved in the import file to maintain formatting.  
12 # Lines that begin with the # symbol are ignored during import.  
13 # Salesforce translation files are exported in the UTF-8 encoding to support extended and double-byte characters. This encoding cannot be changed.
